

Not long ago. Not far away.

Object Exploration Lab: Jewish Communities in Canada

Part 1

Pick three objects that you find most interesting. For each object, fill in the chart with what you **observe** and make **inferences** (educated guesses based on what you see) about what it tells you about life for Jewish Communities in Canada before or around the time of World War II?

Object	What do you observe?	What do you think this object tells you about life for Jewish communities in Canada?

Part 2

Learn more about the objects in the lab. Afterward, fill in what each object you chose actually is. Record any new information you learned, and compare it to the educated guesses (**inferences**) you made in Part 1.

Object	What new information did you learn?	Did it match what you inferred about the object? Was it very different? Did anything surprise you?
